“Part – financed by the European Union”

1. The background

The TRAINING4PORTS project goal is to identify the needs and to prepare the implementation of designed measures to contribute to enable the governments, port authorities, private port operators and training institutes to establish effective and systematic portworker training schemes, designed to improve cargo-handling performance, working conditions and practices, safety, and the status and welfare of portworkers.

The term „port workers” and „dockers” used to refer to jobs which are predominantly manual and to workers engaged in the loading and unloading of ships in ports and in ancillary services such as the checking, storage and intra-port transportation of cargo, and operations at passenger terminals.

During this project implementation we will use the words 'port worker ' and 'docker ' interchangeably, although in most cases we preferred the former , more neutral and general term. Some experts indeed argue that , today, the word docker , which came into use with the opening of closed dock and warehouse areas in the first half of the 19th century, has a pejorative or at least outmoded ring and that it should be replaced by port worker as the latter term acknowledges that the profession now requires special skills and qualifications and relies on the use of sophisticated technology. However , workers' organisations continue to call their members dockers, and the famous anti - liberalisation slogan used by European unions was 'Proud to be a Docker ' . In some Member States, including France, the English word 'docker ' still serves as the official , legal title of the port worker. But other lawmakers expressed a preference for the word 'port worker ' or 'port labourer ' . The meaning of the word 'stevedore' is somewhat ambiguous, as it may refer , in a general sense, to any port worker; more narrowly, to a general port labourer working on the ship (or a 'holdsman' , as opposed to the 'docker ' or 'port worker ' *sensu stricto* who works on shore) or, conversely, to the employer of such workers. In Ireland, for example, the word (master) stevedore specifically refers to the 19th century middlemen who leased the dockers' labour to the ship owners, and in the United States a 'stevedore' acts an employer of ' longshoremen' .

The importance of a highly skilled workforce has become increasingly relevant in the context of the European Union new strategy for smart, sustainable and inclusive

“Part – financed by the European Union”

growth - ‘Europe 2020’. At the individual level, a good education is increasingly decisive for employment prospects and earnings levels. The skills and competences of the workforce are the product of a large variety of learning activities that take place in diverse institutional contexts. While good initial education provides an essential foundation, learning continues through the working years. Policies encouraging wide participation in continuing training are therefore an important component of lifelong learning strategies.

Port labour can be considered narrowly as the loading or unloading of ships, or broadly, as all forms of cargo handling in a port zone, including the stuffing and stripping of containers, the loading and unloading of inland waterway vessels, lorries and railway wagons, the storage and semi - industrial processing of goods in warehouses and logistics areas. In ports where port labour is governed by specific regulations or agreements, employee organisations traditionally try to extend the notion as widely as possible, while employer s' organisations aim to restrict it.

The term port worker is generally used to designate blue collar workers engaged in the handling of goods at docks, quays, wharves or warehouses in ports. It is a generic term which includes general workers (operatives) working on board ship as well as those on land, and specialised workers such as operators (or drivers) of various types of machinery such as forklifts, straddle carriers, reach stackers, bulldozers, bobcats, conveyor belts and cranes (also called winchmen) ; signalmen (hatchmen, hatch tenders or deck hands) ; lashers; tallymen (also called tally clerks or checkers) ; (gang) foremen, chieftallymen and chief foremen (super visors) . Signalmen are stationed at the hatchway opening, give the necessary signals to the winchman and supervise the raising and lowering of slingloads. Lashers are men who lash, unlash, secure and release cargoes stowed in the ship's hold or on deck. Checkers or tallymen keep a tally of quantity or weight of goods shipped or received, and check for apparent damage and shortages. Foremen are responsible for the management and supervision of a gang of workers and may have authority to hire the required number of casual workers for a day or a shift. Typically, one gang of workers is used per ship's hatch or hold, or per shoreside crane

Cargo handling companies also employ office staff involved in administration, sales, marketing, information technology, legal matters *etc.* , but these white collar employees are considered neither 'dockers' , nor 'port workers' for the purposes of this project.

On the other hand, it should also be noted that, in some ports, crane and other equipment operators are legally treated as white collar workers, and that the typical

“Part – financed by the European Union”

docker 's professions of tallyman, chief tallyman, chief foreman entail partly or mainly office work, so that the distinction between blue and white collar is often blurred. Regardless of their blue or white collar status under national or local legal arrangements, we have treated all these 'classical ' categories of dockers as port workers.

In many ports, cargo handlers companies also employ mechanics (also called maintenance or repair men, including electricians) who are responsible for keeping equipment in running condition; these workers often have the same or similar status as port workers proper. Where relevant , we will include them in our project.

Since port labour is by definition carried out within a 'port ' or a 'port area' , the definition of port labour has an important geographical dimension to it. Where port labour is governed by specific laws or collective agreements, it is well-nigh inevitable to expressly determine the exact geographical scope of such instruments. The delimitation may be left vague (e.g. the 'port ' and its 'vicinity' , or the 'maritime public domain') or it may be elaborated in detail (e.g. based on a detailed map or a predefined distance from the waterfront) ; it may be defined either narrowly as the quayside, the water front , or , in ISPS terms, the 'ship/shore interface' , or widely, so as to include adjacent warehousing and logistics areas, inland container depots ('dry ports') and industrial plants behind the water front .

Similarly, some specific port labour regimes distinguish between different types of cargo and exclude some categories from their scope, for example own-account (industrial) cargo, liquid bulk or fish.

Yet another issue is whether specific port labour regimes apply to all ports in a given country, or only to important commercial ports or ports attaining a certain cargo volume threshold.

From the outset an important aspect need to be stressed. Port workers are employed by a variety of employers. Increasingly, port services are provided by private terminal operators holding a lease, concession, licence or authorisation issued by a landlord port authority. In many but not all ports, several terminal operators are in competition with one another . Some workers are employed by public port authorities (especially, crane drivers) or by companies controlled by a state-owned entity. Yet other port workers are self -employed and hired by ship owners or their agents; these workers may at the same time act as employers of other workers.

Port workers include not only permanent workers employed under an employment contract for an indefinite or a definite term fully governed by general labour law, but also permanent workers registered as port workers under specific port labour

“Part – financed by the European Union”

arrangements . Many ports rely on registered pool workers who are hired on a daily basis (or for a shift or a half shift) and who are entitled to an unemployment benefit while they are not working. Finally, many ports use various categories of more or less irregularly employed supplementary workers (occasional or auxiliary workers, including, in some ports, seasonal workers and/or temporary agency or interim workers)

The exact meaning of the notion of 'dock work' was repeatedly discussed at the level of the International Labour Organization (ILO) , but the invariable outcome was that the term can only be defined according to national law or practice, and this compromise solution has been enshrined in, for example, ILO Dock Work Convention No. 13717. Currently, there does not exist a generally applicable definition of the notion of ‘port labour ’ at EU level.

The „port worker” status is regulated only in Romania by the Ports and Waterways Ordinance which govern all waterway transport activities and the administration of port and fairway infrastructure.

According to this the „specific port labour” is performed by port workers (Art.60(2)). The concept of „specific port labour” is defined as the loading and unloading of goods and/or containers in and from ships, the handling of goods to and from warehouses and other means of transportation, storage, stowage, lashing, sorting, paletising, packing, stuffing and stripping of containers, slinging, bagging of goods, as well as cleaning of warehouses and ship’s holds, either done manually or with mechanical means (Art.60(1)). A port worker can be any person who has reached the age of 18 and meets the criteria for health and professional training set by the law (Art 61(1)) of the Ports and Waterway Ordinance. The qualification system is also governed by applicable laws (Art.61(2)). Despite this, currently no specific laws or regulations are in force.

No regulatory framework concerning port activities are in force in Ukraina and Republic of Moldova, yet

“Part – financed by the European Union”

2. The scope and the objective

This study has been developed in order to present the stakeholders database development process and the conclusions drawn from analysis of the data collected by the performed inventory.

The study is one of the results of the work package 1 which has been developed under the responsibility of the lead partner with contributions gave by all project partners

All project partners worked to collect the informations from each own country and translated it into English language.

The database for each country is available, on partners websites, for consultation and use for all interested parties,by project partners care

The objective of study is to summarise in a coherent manner informations related to relevant stakeholders and available training services available on the market which are necessary to be provided by project partners for the consultant support to develop the market research according to work package 2 activities

“Part – financed by the European Union”

3. The methodology

3.1. The database structure

First step of the process is the establishment of the relevant informations for the scope of the work that have to be collected. The targeted stakeholders category are : employers, trade unions of port workers and providers of training services for port workers.

A database has been developed for each of involved countries : Romania, Republic of Moldova and Ukraine.

Each database is structured by the three categories of stakeholders

All informations are provided in each involved country language and in English

3.2. The inventory

An inventory of the port services providers, trade unions of port workers and training services providers has been developed.

The main sources for informations are the associations and the specialised websites. Where a large number of stakeholders has been found for a particular category an appropriate number has been selected based on the relevance for the project scope

3.3. The collection process

To collect the informations a questionnaire has been developed.

The questionnaire template has been drawn in the national language of each involved countries and in a manner which allows it to be filled out easy.

The informations has been collected in two ways : by distribution to the identified stakeholders and directly, by the projects experts through available resources survey.

All partners sent the questionnaires filled in, transaled into English, to the lead partner which centralized it the form of a database

3.4. The analysis of the database

The collected informations has been analised by projects experts to came to a conclusion regarding the dimension of the port service providers and training services providers market in each involved countries.

Also, the existing trade unions gave an image over the social dimension of the port labour force from the involved countries

4. The results

“Part – financed by the European Union”

The stakeholders definition :

- Employers : port services providers. The selection area are inland ports from Romania, Ukraina and Republic of Moldova as follows :

Romania : Drobeta Turnu-Severin, Orsova, Calafat, Bechet, Moldova Noua, Giurgiu, Calarasi, Cernavoda, Braila, Galati, Isaccea, Tulcea, Mahmudia

Ukraina : Ismail, Reni

Republic of Moldova : Giurgiulesti, Ungheni

- Trade unions : trade unions for port workers has been identified only in Romania.
- Training services providers for operational staff in ports : before starting the research, the experts identified all existing jobs for operational staff in port. Based on this categories of jobs the experts start to identify those training services providers which are authorized for such training courses.

Survey of jobs for port workers

The survey has been performed by experts , each for his own country, starting from the existing regulatory framework for occupations

In Romania the occupations are established and defined by the Ministry of Labour, family and social protection and the President of National Institute for Statistics common Order no.1.832/856/2011 (the Romanian Code of Occupations) – COR (abbreviation), with subsequent amendments and additions.

The Romanian Code of Occupations has been elaborated based on the structure of jobs-the basic level group, as it has been established by the Government Decision no.1352/2010, according to the International standard classification of jobs (ISCO 08 (r.1)

“Part – financed by the European Union”

4. The survey results

The survey conducted in Romania, regarding the existing defined jobs for port operational staff , came to results as follows :

Code	Job	COR position	Correspondence with ISCO 08	Short description
834301	Cranemaster	Major group 8 /Minor group 834/8343 Drivers for cranes, mobile bridges, subway elevators and similar	8343 - Crane, hoist and related plant operators	The drivers for cranes, mobile bridges, subway elevators and similar, operate and survey during functioning time these equipments
834302	Mobile bridge operator	Major group 8 /Minor group 834/8343 Drivers for cranes, mobile bridges, subway elevators and similar	8343 - Crane, hoist and related plant operators	The drivers for cranes, mobile bridges, subway elevators and similar, operate and survey during functioning time these equipments

“Part – financed by the European Union”

The survey conducted in Republic of Moldova :

The classification list of professions and qualifications in the Republic of Moldova has been adopted by Government Decision no. 425/03.07.2015

The General Area	Education Area	Domain of professional formation	The profession code	The profession name
10.Services	104. Transport services	1041 Transport services	1041001	Help Machinist (mechanical) from Diesel-powered trains
			1041002	Driver
			1041003	Loader driver
			1041004	Trolley driver
			1041005	Accompanying passenger coaches
			1041006	Autograder driver
			1041007	Mobile crane master (crane driver)
			1041008	Concrete pump operator
			1041009	Tower crane and hydraulic lifts operator
			1041010	Bulldozer driver
			1041011	Single bucket demolition operator
			1041012	Elevator-grader operator
			1041013	Non-propelled grader operator
			1041014	Rail crane master (crane driver)
			1041015	Operator on Pouring machine for asphaltic concrete
			1041016	Screper operator
			1041017	Operator on mechanized and automated warehouses
			1041018	Tractor driver
			1041019	Tractor driver for agriculture

The survey shows that there is no specific professions for port activities. Some of it (tractor driver, mobile cranemaster, rail cranemaster, operator on mechanized and automated warehouses and elevator-grader operator) can be taken into consideration for port activities but the occupational standards need to be checked if match with port activities.

According to the last study concerning labour force and regulatory framework in the Republic of Moldova , there are still unsolved problems as lack of qualified personel for ports, the majority of the existing being not qualified.

“Part – financed by the European Union”

Another issue is the lack of occupational standards for the majority of professions due to the late adoption of the Governmental Decision no.863/08.10.2014 by which has been approved the methodology for the elaboration of occupational standards. Currently working groups has been settled for this purpose.

The survey conducted in Ukraina :

The list of professions and qualifications in Ucraina :

<i>No.</i>	<i>Profession</i>
1	Mechanic (docker- mechanic)
2	Forklift driver
3	Electric and gas welder
4	Lifter
5	Boiler room operator
6	Mechanic on repair and maintenance of handling machines
7	Electrician of repair and maintenance of electrical equipment
8	Cranemaster (crane driver)
9	Turner
10	Slinger
11	Tallyman
12	Tractor-driver
13	Mechanic for rigging and handling devices

Survey of the trade unions

The survey has been conducted in Romania, Ukraina and Republic of Moldova

In Romania has been identified three organisations

1. Danube Workers Trade Union "FARUL"

- President: Stefan FRUNZA;
- mobile: 0745/664958;

“Part – financed by the European Union”

- 540 members

2. Free Trade Union “PortBazinul Nou”

- President: Ion ARVANITOPOL;
- mobile: 0721/637304;
- 420 members

3. "FORTUNA" Trade Union (Port Labour Agency)

- President: Aurel BRAILESCU;
- mobile 0744/629640;
- 270 members

4. "FARUL"- SULINA Trade Union

- President Meluta POPA;
- mobile 0752/151767;
- 120 members

In Ukraina has been identified one organization : the Independent trade union of Izmail Port. The members are only workers employed by Port operator in Izmail

No trade union has been identified in Republic of Moldova

The survey of training services providers

The survey has been conducted in Romania, Ukraina and Republic of Moldova

The survey conducted in Romania identified a large number of training services providers. Among these has been selected those which provide courses for occupations identified to be related to port activities as has been found out from the survey of jobs for port workers

“Part – financed by the European Union”

The survey conducted in Ukraina concluded that there are two training services providers, both acting as a department of the port operator company. There are two port operator companies , one in Izmail and one in Reni. Both are state owned. These mainly train and qualify companies employers but can provide services for others. Till now there were no case.

The EDUCATIONAL-TRAINING CENTER/COMBINE OF IZMAIL BRANCH OF STATE ENTERPRISE “UKRAINIAN SEA PORTS AUTHORITY” (ETC of IB SE “USPA”) is licensed by the Ministry of Education and Science AE No. 527093 from 08.09.2014.

ETC of IB SE “USPA” provide services of professional and technical education to:

- port workers;
- third parties to train their staff;
- individuals who have reached the age of 18 and with secondary education without further employment.

After completion of training, participants receive State Certificate.

The list of training courses :

<i>No.</i>	<i>Name</i>
1	Mechanic (docker- mechanic)
2	Forklift driver
3	Electric and gas welder
4	Lifter
5	Boiler room operator
6	Mechanic on repair and maintenance of handling machines
7	Electrician of repair and maintenance of electrical equipment
8	Cranemaster (crane driver)
9	Turner
10	Slinger
11	Tallyman
12	Tractor-driver

The educational-training center/combine of Reni Brach of State Enterprise “Ukrainian Sea Ports Authority” provide services of professional and technical education to:

- port workers;

“Part – financed by the European Union”

- third parties to train their staff;
- individuals who have reached the age of 18 and with secondary education without further employment.

After completion of training, participants receive State Certificate.

The list of training courses :

No.	Name of profession	Training period/education term (months)
1	Mechanic on repair and maintenance of handling machines	3
2	Mechanic for rigging and handling devices	4
3	Mechanic for operation and maintenance of gas equipment	4
4	Machinist of technologic pumps	5
5	Machinist of pumping installations	3
6	Fixer (electrician) of ways (railways)	2
7	Ship electrician	5
8	Blacksmith of hand-forged	5
9	Tinsmith	5
10	Worker of merge and pour	2
11	Sailor of 2 nd class	4
12	Minder (motorist) of 2 nd class	5
13	Electrician on repair and maintenance of electrical equipment	6
14	Mechanic repairman	5
15	Electric and gas welder	5
16	Turner	4
17	Tallyman	3
18	Docker mechanic of 4 th class	2
19	Electrician of telephone station equipment	3
20	Electrical mechanic	3
21	Yardmaster	3
22	Carpenter	3
23	Cranemaster (crane driver)	3
24	Forklift driver	1

This work-based learning refers to learning that occurs when people do real work. Trainers are experienced employees designed by the manager to do this work beside the basic tasks. This work can be paid or unpaid, but it must be real work that leads to the production of real goods and services.

“Part – financed by the European Union”

This kind of providing training is specific to some enterprises, particularly large ones, which have their own training classrooms or workshops, and employees take time away from work to attend training sessions in them. This type of training was very common in many countries of the former Soviet Union. This is not work-based learning. It is simply classroom-based learning that happens to take place in an enterprise rather than in an educational institution.

The survey conducted in Republic of Moldova reveal that there is no VET system only the national educational system including the schools for qualification for crafts and technical college. They provide qualification for some occupations as tractor driver, forklift driver and crane master which are common for ports but no other port related occupations.

The identified educational organizations are :

Name	Address	Contact details	Qualifications
Polytechnic College, Chisinau	Melestiu, 12 Chişinău	+373 22 27 27 83; +373 22 27 25 94	Mechanic, Welder

This system do not ensure acces for qualification for people over the age of tuition in the national educational system

“Part – financed by the European Union”

5. Conclusions

In ports around the world there is now a demand for significant change in skills development. Port work has been transformed in recent years by a combination of the growth in world trade; containerization and other mechanized forms of cargo handling, the introduction of new information and communication technologies (ICT) to direct and track the movement of goods throughout the transport chain; the vertical integration of transport companies offering a “door-to-door” service to clients; and the increasing concentration of port activities under the control of just a handful of global terminal operators (GTOs).

Table 1 summarizes the changing world of port work. Taken together, these changes have transformed the skills required of a portworker, which in turn demand a new professional training system. These changes also open the industry to new sources of labour supply, most notably the increasing number of women who drive equipment, tally cargo and perform information technology (IT) jobs in the operational control departments of major ports around the world.

The changing world of port work

From	→	Towards
General labourers	→	Multiskilled/specialist workers
Labour-intensive operations	→	Capital-intensive operations
Break-bulk handling	→	Specialized operations
Casual hiring	→	Permanent employment
Informal on-the-job training	→	Formalized training
Male workforce	→	Diversified labour force

Training programmes in many ports have been adapted to this changing pattern of labour supply and the demand for new and/or combined skills. There has been a shift in emphasis from “job analysis” being used to pinpoint the skills needed for a particular job, to an identification of competencies required for a given function. Many of these competencies are common to a significant number of functions in ports – and indeed are necessary throughout the transport and logistics chain. Competencies can therefore be combined to create recognized qualifications for portworkers as part of a national qualifications framework, although it should be noted that a sector-based approach is often more viable than an attempt to create one education and training system for all, applying to all industries.

“Part – financed by the European Union”

A key advantage of a competency-based approach is that it relates to learning outcomes or outputs, irrespective of the route of acquisition involved, rather than learning inputs (or “time served”). Therefore, a competent person is someone who: (a) possesses certain knowledge, skills and attitudes (KSA) which she or he can use (b) to perform specified tasks to (c) a standard of performance expected in (d) a specified workplace under (e) conditions of uncertainty and change. The purpose of competency-based training, however, is not simply to ensure that workers are equipped to meet their current job demands, but to provide workers with the competencies they need (the necessary attributes) to perform efficiently today and in the foreseeable future. This “multidimensional” approach is more consistent with the broader objective of decent work for all women and men in the twenty-first century and it echoes the long-standing principle that “labour is not a commodity”. Jobs should not be defined in purely technical terms or simply in terms of a person’s “value” to their employer.

The regulatory framework concerning port activities are aligned to EU regulations in Romania and start to be aligned in Ukraine since 2014. In Republic of Moldova the issue is not yet clear regulated but should be taken into consideration the lack of tradition in this sector as there is one port – Giurgiulesti, since it is quite new.

Even if the port activities are clear regulated, the status of port workers are still unclear. Out of Romania where the regulation concerning port activities contain a chapter dedicated to port workers, Ukraina and Republic of Moldova has no regulation on it. The Romanian regulation stated the port workers statute and mention the training obligation but don’t go too deep so the issue is still unclear, which are the occupations related to port activities, the minim training requirements, the certification and conditions related to required competences to be fulfilled for certification.

Regarding the corespondance between the regulatory framework concerning port activities and port worker statute and the regulatory framework concerning occupations at national level, the survey results show a lack of harmonization and discrepancies. These aspects will be detailed in the strategy developed by the consultant, on WP2

As concerning the training services market it will be deep analized in the strategy as well but some comments has to be made. In light of the job crisis and skills mismatch between labour market needs and training provided by general and vocational education systems in many countries, it has become widely recognized that TVET

“Part – financed by the European Union”

provision is an important, even growing, part of national education systems and any skills development agenda. At the same time, the capacity of the TVET sector to adequately prepare skilled workers through the provision of relevant skills development programmes of high-quality depends largely on the quality of its teachers and trainers, and, by extension, the quality of its teacher training programmes. Given existing teacher shortages within the field of TVET, it is imperative to take a critical view of current TVET teacher training programmes and identify the challenges therein, including:

Lack of structure and relevance to ensure that TVET is recognized as a potential career path and that teachers and trainers are adequately prepared to share these skills with young people;

- Lack of responsiveness and inclusion to ensure that TVET teacher training programmes are not limiting the specific fields and opportunities available to instructors and the students they teach;
- Lack of innovation and progress to ensure that TVET teacher training programmes are constantly evolving and adapting to the latest advances in pedagogy and technology; and
- Lack of representation and communication to ensure that TVET teachers and trainers have an active voice and collegial support system to encourage them and enhance job satisfaction.

Regarding the social aspects of port labour there is a lack of any associative forms of port workers. Even in Romania the port workers associations registered a strong decline since 2010 when the last common labour contract for transport sector ended and the law do not stated as manadatory to be further concluded. Currently, the existing trade unions' activity slowed down their activity and some even stoped.

In Republic of Moldova the associative activity in port sector is missing

In Ukraina it just begin to appear and only one free trade union has been identified.
